DQM viewer upgrade

JSROOT based DQM is now in operation!

- jsroot: <https://root.cern.ch/js/>
- Histograms in TMemFile are packed into TCanvas
- Shown in web browser of CSS (internal browser) by THTTP

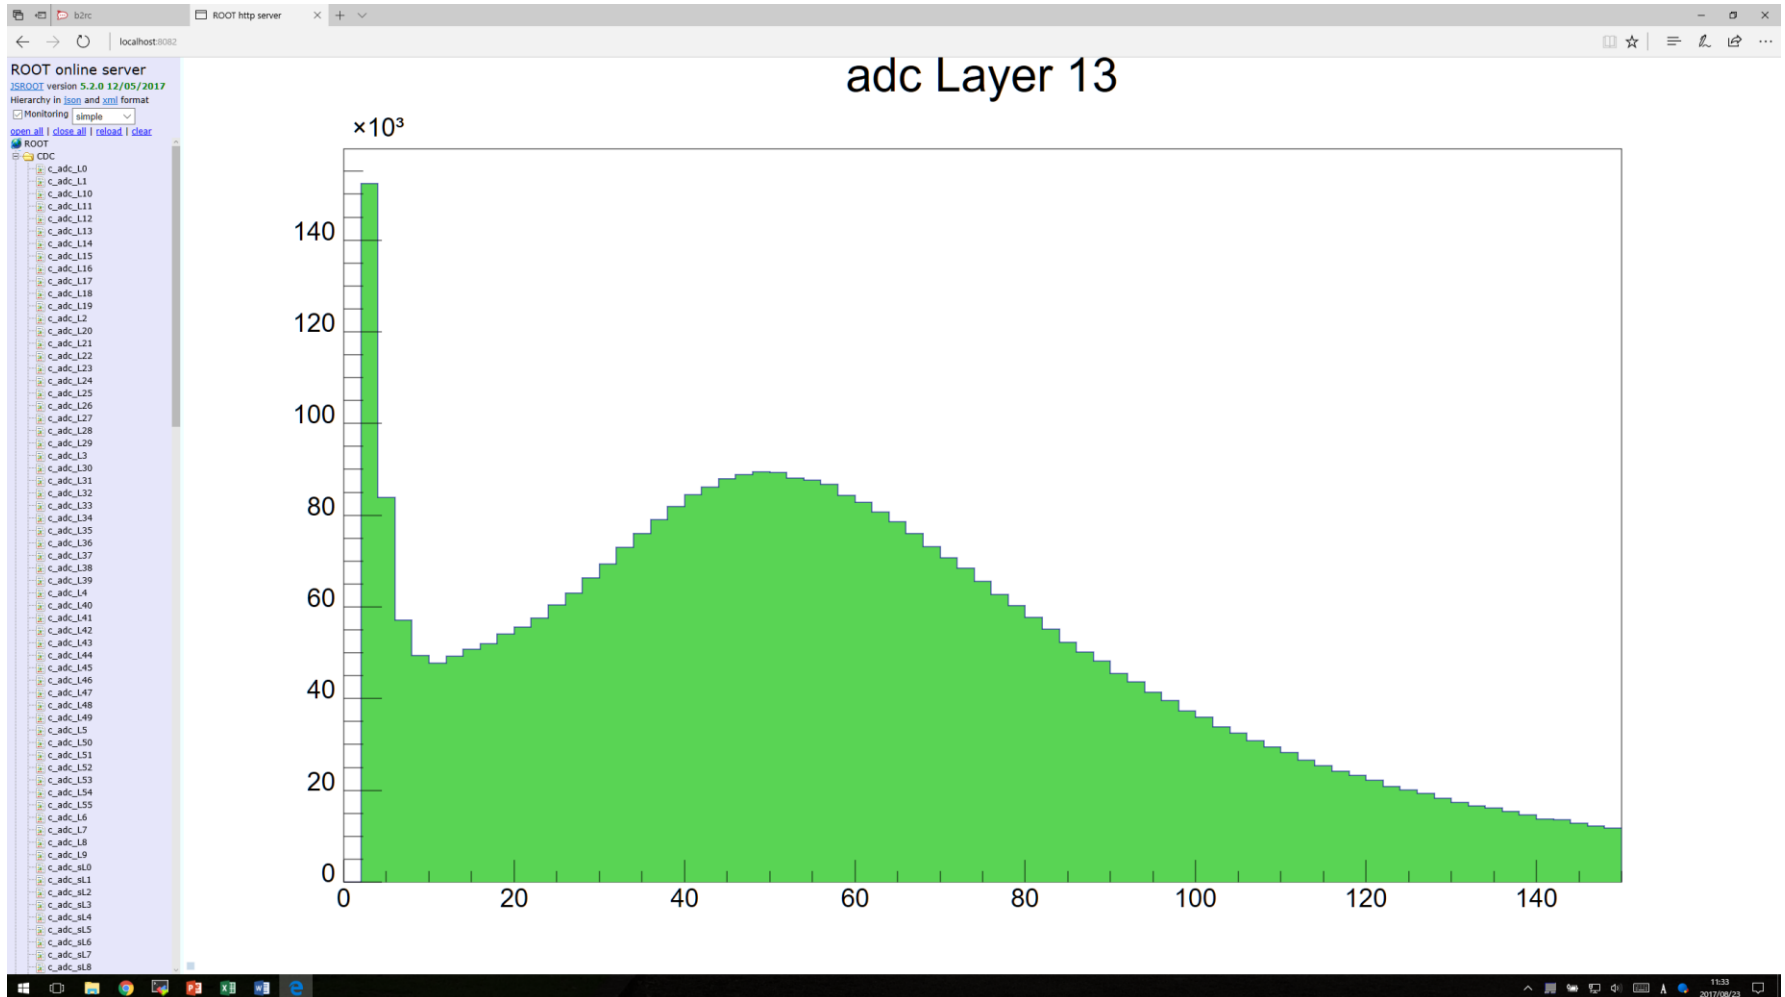

3 components working in the new scheme

- basf2 in HLT/expreco analyze online data to generate histograms same as before
- dqmana.py (basf2 script) analyze histograms to pack into TCanvas
 - Adding new modules for dedicated analysis
 - Reference histogram can be added here
- canvasserver.C (root script) accepts TMessages with canvases and distributes them to browsers (THttpServer)
 - CSS and browser are available as viewer

Canvases in jsroot

- running in `http://rc01.b2nsm.kek.jp:8082`
-> available using ssh tunneling: `ssh -L 8082:rc01:8082 -f -N bdaq.local.kek.jp`

Adding histogram analysis module

DQM histogram analysis is now in a basf2 module

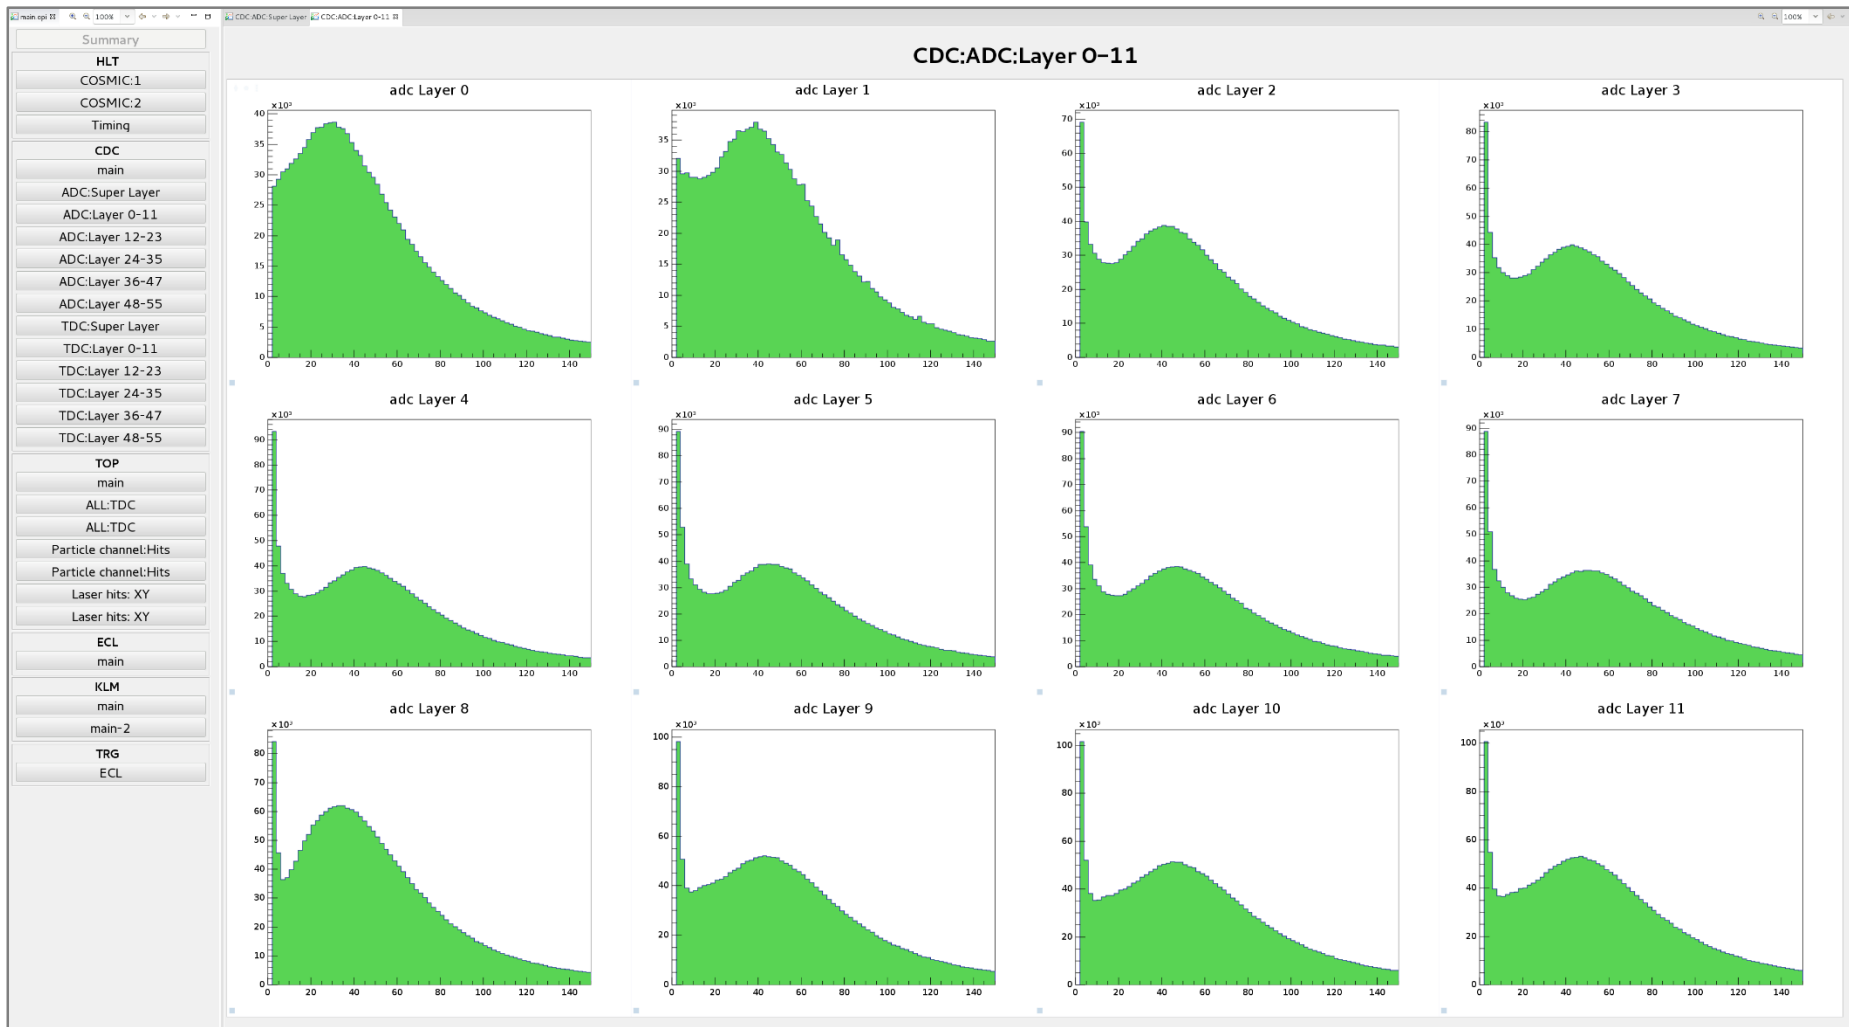

- DQMHistAnalysisInput extracts histograms from TMemFile
 - Provides canvas per histogram by default (shown in the GCRT)
- **Detector experts are expected to add their own modules**
 - An example code of analysis module is in Belle II git:
daq/dqm/analysis/modules/DQMHistAnalysisExample.h

```
void DQMHistAnalysisExampleModule::event()
{
  TH1* h = findHist(m_dirname, m_histname);
  if (h != NULL) {
    m_c->cd();
    h->Draw();
    TString a = m_dirname + "_" + m_histname;
    h->Fit("f_"+a);
    m_c->Update();
  } else {
    B2WARN("Histo " << m_histname << " not found");
  }
}
```

DQMHistAnalysisExample is extended from DQMHistAnalysis (extended from HistoModule)

- **event()** is called at every refresh of histograms in memory : ~ 5sec
- **findHist()** finds histogram in the memory
- TCanvas::**Update()** is called in the end
 - Canvases are transferred by DQMHistoAnalysisOutputReplyMsg
- daq/dqm/analysis/example/dqmana.py is the script used in the GCRT

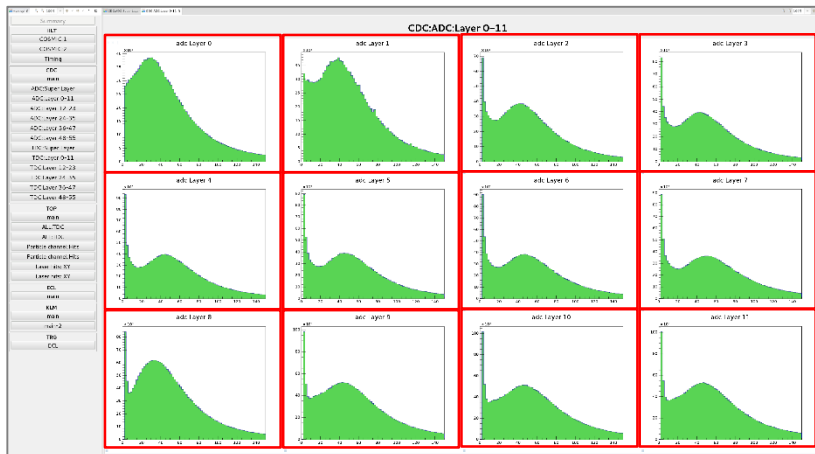

DQM plots for CDC

- Canvases are shown in CSS internal web browser (webcat)

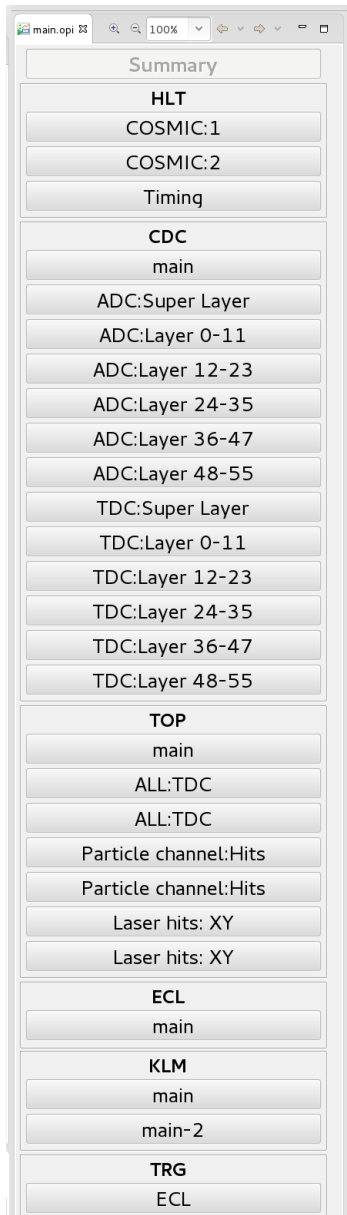

Fixing issues

- DQM CSS was crashed very often (once per day or more)
 - Due to huge memory usage reaching limit of process memory
 - An internal browser was assigned to each canvas => much memories!
 - http://rc01.b2nsm.kek.jp:8082/?nobrowser&item=CDC/c_adc_L0
 - THttpServer has an option to show multiple canvases in grid layout
 - [http://rc01.daqnet.kek.jp:8082/?nobrowser&items=\[CDC/c_adc_L0,CDC/c_adc_L1,..](http://rc01.daqnet.kek.jp:8082/?nobrowser&items=[CDC/c_adc_L0,CDC/c_adc_L1,..)
 - More flexible if dedicated html file is prepared
 - Now memory usages are significantly saved
- => CSS has no crash after the modification

OPI files for viewer

- OPI files are now available in DESY stash (Belle II Group)
 - `git clone ssh://git@stash.desy.de/daq_dqm_gui/`
 - Usage: `import daq_dqm_gui/DQM` into your CSS
- DQM/template/4K_4x3.opi is used as default
 - Macros for histogram names
 - => Buttons in the side panel allocate histogram names
- Current issue: Buttons are created by T.K. hid=9
 - Important histograms might be missed!
 - => **Detector experts are expected to make your OPI files**
- Another option is to create html files dedicated for each subdetectors from detector experts
 - Need more dedicated techniques of HTML5 and jsroot

Summary

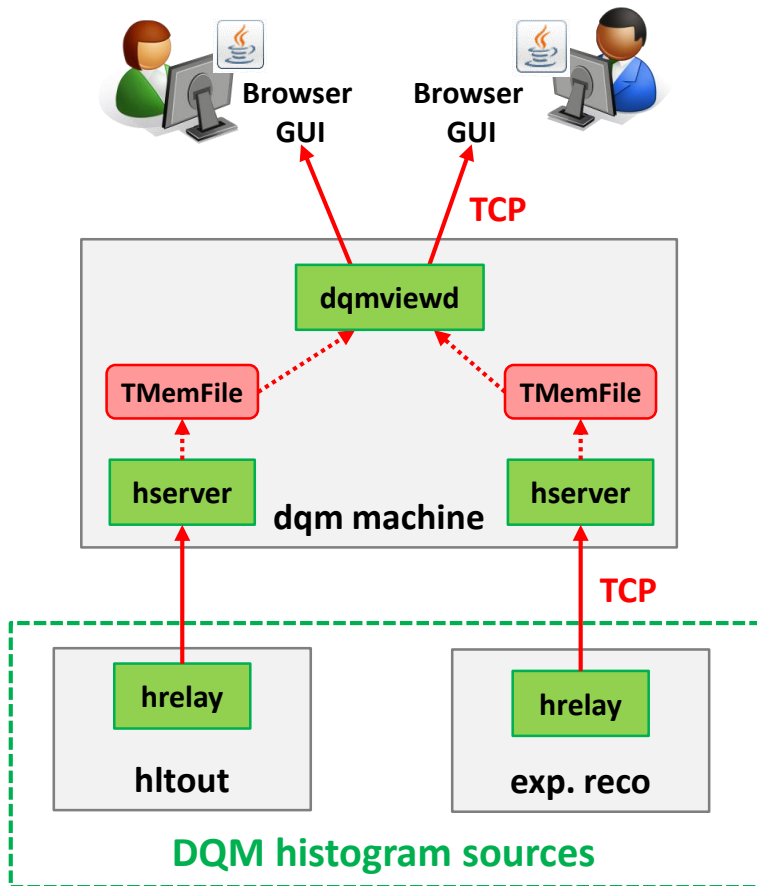

- Guideline for DQM panels are being prepared
 - But still in my mind. Please give me feedback
 - 4 x 3 plots in a page looks best for 4K display in the control room
 - A template can be used with macros
 - B. Wang prepared nice panels available templates
- Implementation of DQM (+browsing) are still ongoing
 - DQM for Tracking is only available live DQM
 - CDC, ECL, TOP and KLM prepared DQM modules but not included yet
 - TRG provides ECL TRG DQM only others are not ready yet
 - PXD, SVD and tracking DQM are tested in the beam test at DESY
- A plan for upgrade with JSROOT
 - Replaced after stable cosmic run get started
 - Template will reduce the effort of replacement

Live DQM display in control room

- DQM browser is implemented in control system studio
 - Introduction page is available for Belle II members:
<https://confluence.desy.de/display/BI/DQM+viewer+panel>
- There is one 4K display : resolution: 3840x2160
 - One display is fully available for DQM browsing
- Discussion for guideline of viewer panels
 - B. Wang prepared nice examples for templates
 - Size and layout of the plots in 4K display
 - **4 x 3 plots (800x640)** : maximum # of plots in a panel
 - Layers of view panels
 - Main summary page over detectors: 1-2 plots/detector
 - Detector summary page : 1 page / detector
 - Detector details pages : 3-4 pages

Discussion about layout of DQM viewer is just started at this B2GM

Overview of DQM browsing

- DQM Histograms are collected and merged in hrelay - hserver chains
 - HLT
 - Express reco.
- dqmviewd : interface to user
 - Distributes histograms to GUIs
 - Extracts histograms in TMemFiles
- DQM browser
 - works on Control System Studio
 - A eclipse plugin
 - 1-D and 2-D histograms converted from TH1 and TH2
 - Histograms are identified by names
